

Markdown Formatting

This guide documents Markdown features that render correctly in Pluto.jl using `md""" ... """` blocks. All examples are Markdown-native and safe for assignments and assessments`

***Use triple-quoted strings for all multi-line markdown in Pluto

1. Basic Text Formatting	headings • # H1 • ## H2 • ### H3 • #### H4	text decorations • bold • <i>italic</i> • <u>italic</u> • <code>inline code</code>
	strikethrough begin using CommonMark p() = enable!(Parser(), StrikethroughRule()) cm""" this text is strikethrough using HTML <s>this is also strikethrough</s> """p end	
2. Lists	bullet lists - Item 1 - Item 2 - Sub-item - Sub-sub-item	numbered lists 1. First 2. Second 3. Third
	task lists - [x] Completed - [] Not completed	

3. Blockquotes and Horizontal Rules	<pre>> This is a blockquote >> Nested quote --- ← horizontal line</pre>	
4. Code Blocks	<pre>julia ```julia f(x) = x^2 f(3) ```</pre>	<pre>python ```python print("hello") ```</pre>
5. Links and Images	<pre>[Pluto Website] (https://plutojl.org) ![Alt text] (image_url_here)</pre>	
6. Tables	<pre> Variable Meaning Value ----- ----- ----- x input 10 f(x) output 100 </pre>	<pre>alignment Left Center Right :----- :----- :----- a b c </pre>
7. Pluto Julia Interpolation	<pre>for: x = 10 md""" The computed value is **\$(x^2)**. """ renders as: The computed value is 100 </pre>	
8. LaTeX Math	<pre>inline equation \$E = mc^2\$ renders as: E = mc² </pre>	

block equation

```
```math
\frac{1}{2 \pi}
```
```

renders as:

$$\frac{1}{2\pi}$$

aligned equations

```
md"""
```math
\begin{aligned}
E &= mc^2 \\
F &= ma \\
PV &= nRT
\end{aligned}
```
"""
```

renders as:

$$\begin{aligned} E &= mc^2 \\ F &= ma \\ PV &= nRT \end{aligned}$$

integral

here is the Gaussian integral:

```
`` \int_{-\infty}^{\infty} e^{-x^2} dx = \sqrt{\pi} ``
```

renders as:

$$\int_{-\infty}^{\infty} e^{-x^2} dx = \sqrt{\pi}$$
